Lightroom is now available via Creative Cloud, which includes access to an online editing library, library backups, a cloud database, and more. That means that once you've completed a project, you can ensure that your photos are safely backed up. If you get rid of that hard drive, for whatever reason, and you lose your images, you'll never lose them. If Lightroom crashes, you'll have a version of your library stored as well. With the redesign, Lightroom walks a similar thin line of functionality, familiarity, and excellence. It's more self-contained and familiar. Like the new version of Photoshop, Lightroom is more of a standalone application than a catalog or image-management system. The new version doesn't yet have seamless integration with Android or iOS tablets—you can use Lightroom on a PC, or export to an iPad version of Lightroom, but you can't coexist.

The lack of integration is a problem in one of Lightroom's most important areas. Using Lightroom for design work has always been a little disjointed. The tool feels like a collection of spectacular features that could have been tweaked and sold for a fortune, but never will be. The idea of putting your image-editing tool inside of a catalog is usually terrible, because the catalog should do one thing and one thing only. Lightroom doesn't always do that. The only downside is the lack of Photoshop for iPad. With the latest release of Photoshop CC, though, that should not be a problem. The iPad version is pretty much the same Photoshop CC and should in theory reach the same level of performance. In reality, it does seem to work pretty well, with the interface and workflow generally being just the same. Like the Mac version, Photoshop CC for iPad will support layer comps, guides, smart guides, and lens corrections, as well as the X-Clip tool, and give you access to Photoshop CC's Features » Tools panel.
